ALEENA ZAFAR

LETTER OF AUTHORIZATION FOR CYBERSECURITY TESTING

Reference No.	AZ-LOA-B084-WK2-001
Date of issue	12 November 2026
Client / Target owner	Aleena Zafar (own lab); scanme.nmap.org (Nmap Project public test server)
Authorized tester (Intern)	Aleena Zafar
Program / Batch	B084 - Networkwalks Cybersecurity Internship
Authorization valid	10 November 2026 to 13 November 2026

To Whom It May Concern,

This letter confirms that Aleena Zafar (the “Target owner”) grants written permission to the authorized tester named above to perform limited, non-destructive security testing against the systems listed in the scope below. This authorization is issued as part of the Networkwalks Cybersecurity Internship (Batch B084), Week 2 projects W2-PM1 and W2-PM5, and is valid only for the dates stated above.

1. Scope of Authorization

The tester is authorized to perform reconnaissance and scanning activities against the following targets only:

- The tester’s own virtual lab network: VirtualBox NAT Network “NatNetwork” (10.0.0.0/24), containing the Kali Linux VM (10.0.0.2) and the network gateway (10.0.0.1), owned and controlled by the tester.
- scanme.nmap.org (45.33.32.156) — a public server that the Nmap Project provides for practising scans.
- Public WHOIS and DNS lookups of the parent domain nmap.org, used only to read public registration data. nmap.org itself is not scanned.

Any system, domain, IP address or network not listed above is strictly out of scope and must not be tested.

2. Authorized Activities

Only the following activities are permitted under this authorization (Phase 1 and Phase 2 of a penetration test):

- Footprinting and reconnaissance using passive and light information-gathering tools (for example whois, nslookup, dig, whatweb, wafw00f, dnsrecon).
- Network scanning and host discovery (for example a Zenmap or Nmap Quick, Regular or Intense scan of the tester’s own lab subnet, and a Regular scan of scanme.nmap.org).

3. Prohibited Activities

The following are NOT authorized under this letter and must not be attempted:

- Exploitation, gaining unauthorized access, or privilege escalation.
- Denial-of-service, brute-force, password attacks or any activity that could disrupt or damage a service.
- Accessing, copying, modifying or deleting any data belonging to any third party.
- Testing any network, device or website outside the scope in Section 1, including any office, home or public network not owned by the tester.

4. Conditions

- The tester must stop all testing immediately if any unexpected disruption occurs.
- All findings and any information discovered must be kept confidential and used only for this internship.
- The tester acts responsibly and lawfully at all times, and is solely responsible for any action taken outside this authorized scope.

- This authorization expires on the end date shown above and must be renewed in writing to remain valid.

5. Acknowledgement

By signing below, the Target owner confirms it owns or controls the in-scope lab targets and authorizes the described testing, and the tester confirms they have read, understood and will comply with the scope and conditions of this letter.

Authorized by (Target owner):

Aleena Zafar
Owner of the lab network
Signature: _____
Date: _____

Acknowledged by (Tester):

Aleena Zafar
Intern, Batch B084
Signature: _____
Date: _____
